Implant Soft Tissue
Masterclass

14th October 2024

London

About the Course

Master the art of successful soft tissue grafting around implants. Learn to apply the latest techniques from tunnelling to conventional sub-epithelial connective grafts around implants. This masterclass will facilitate confidence in performing soft tissue grafting around implant using both autogenous and xenografts.

This is a hands on course and will focus on the practical aspects of soft tissue grafting.

Course Objectives

Understand the rationale behind soft tissue grafting

- Anatomy, biology and wound healing process in peri implant tissues

- Diagnosis of soft tissue defects around implants

- Indications and contraindications for soft tissue grafting around implants

- The use of xenografts and alternatives to autogenous soft tissue grafts

- Complications associated with soft tissue grafting

- Flap designs and tunnelling techniques

- Harvesting of autogenous soft tissue grafts

- Hands on experience with xenograft soft tissue graft materials

- Soft tissue grafting around implants using both autogenous and xenograft biomaterials

- Suturing techniques
